

FOCUS GROWTH BLEND PORTFOLIO OVERVIEW

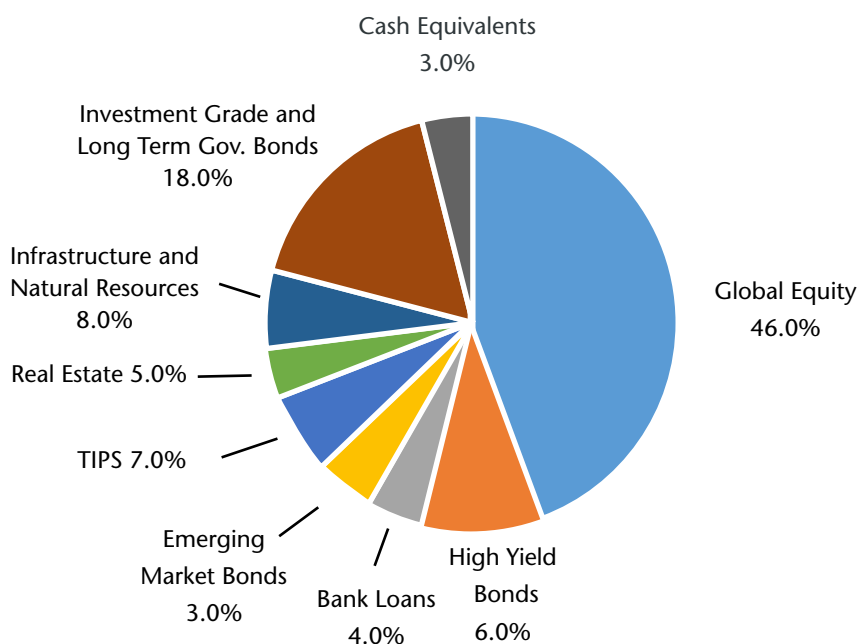

The Focus Growth Blend Portfolio is designed to achieve a total return equal to or greater than the foundation’s spending needs plus inflation (similar to the Long Term Endowment Portfolio). Distributions from the portfolio are not restricted by a spending policy. Therefore, the portfolio is invested in 100% liquid assets, including a diversified pool of global equities, fixed income, real assets, and cash. The portfolio is expected to exhibit slightly higher volatility than the Long Term Endowment Portfolio.

Investment Advisor: Meketa Investment Group
Total Invested Assets: \$13.5 MM as of December 31, 2017

Portfolio Expectations:
 Expected Return (20-year) 7.00%
 *Standard Deviation 12.40%
 **Sharpe Ratio 0.34%

ITD- Inception to Date

*Standard Deviation-is a statistic that tells how tightly a set of numbers are clustered around the mean. It is used to help evaluate the volatility or risk, inherent in a security or portfolio. The standard deviation of a series is a measure of the extent to which observations in a series differ from the arithmetic mean of the series. For example, if a security has an expected average annual rate of return of 10% and a standard deviation of 5%, then two-thirds of the time or 68% of the time, one would expect to receive an annual rate of return between 5% and 15%.

**Sharpe Ratio-A measure of portfolio efficiency and a commonly used measure of risk-adjusted return. The sharpe ratio indicate excess portfolio return for each unit of risk associated with achieving the excess return. The higher the sharpe ratio, the better the fund’s historical risk-adjusted performance.
